

The Opportunities of Blockchain for Renewable Energy Technologies

#REMforum, June 1, 2018

Dr. Christoph Sutter | Head Division New Energies, Member Executive Board Axpo Power AG, [Chairman elblox AG](#)

```

func (e *Elblox) init() error {
    log.Println("Initializing the Elblox platform...")
    // check if account file exists and skip smart contract deployment then
    if e.p.Addr == nil {
        // deploy smart contract if not already deployed
        addr, err := e.deploy()
        if err != nil {
            return err
        }
        log.Printf("Elblox smart contract address: %v", addr.Hex())
        // write smart contract addr to file
        if err := e.p.SetSmartContractAddress(addr); err != nil {
            return err
        }
        // register the smart contract account
        if err := e.p.Register(addr.Hex()); err != nil {
            return err
        }
        return nil
    }
    // bind to the already deployed smart contract
    var err error
    log.Printf("[%v] Elblox binding to already deployed smart contract %v", e.p.ID, e.p.Addr.Hex())
    sc, err := contract.NewElblox(*e.p.Addr, backends.NewRPCBackend(e.p.c.Eth()))
    e.session = &contract.ElbloxSession{
        Contract: sc,
        CallOpts: bind.CallOpts{
            Pending: true,
        },
        TransactOpts: bind.TransactOpts{
            From:    e.p.c.Auth().From,
            Signer:   e.p.c.Auth().Signer,
        },
    },
}

```

With what type of electricity did you charge your mobile phone last night?

elblox

**ELBLOX PLATFORM. THE REGIONAL P2P ENERGY
MARKET**

Elblox: Vision

INTELLIGENT ALLOCATION
OF PRODUCTION TO
CONSUMPTION

MARKET-BASED PRICING
DEPENDING ON SUPPLY
AND DEMAND

DOCUMENTED ON A
CONSORTIUM
BLOCKCHAIN

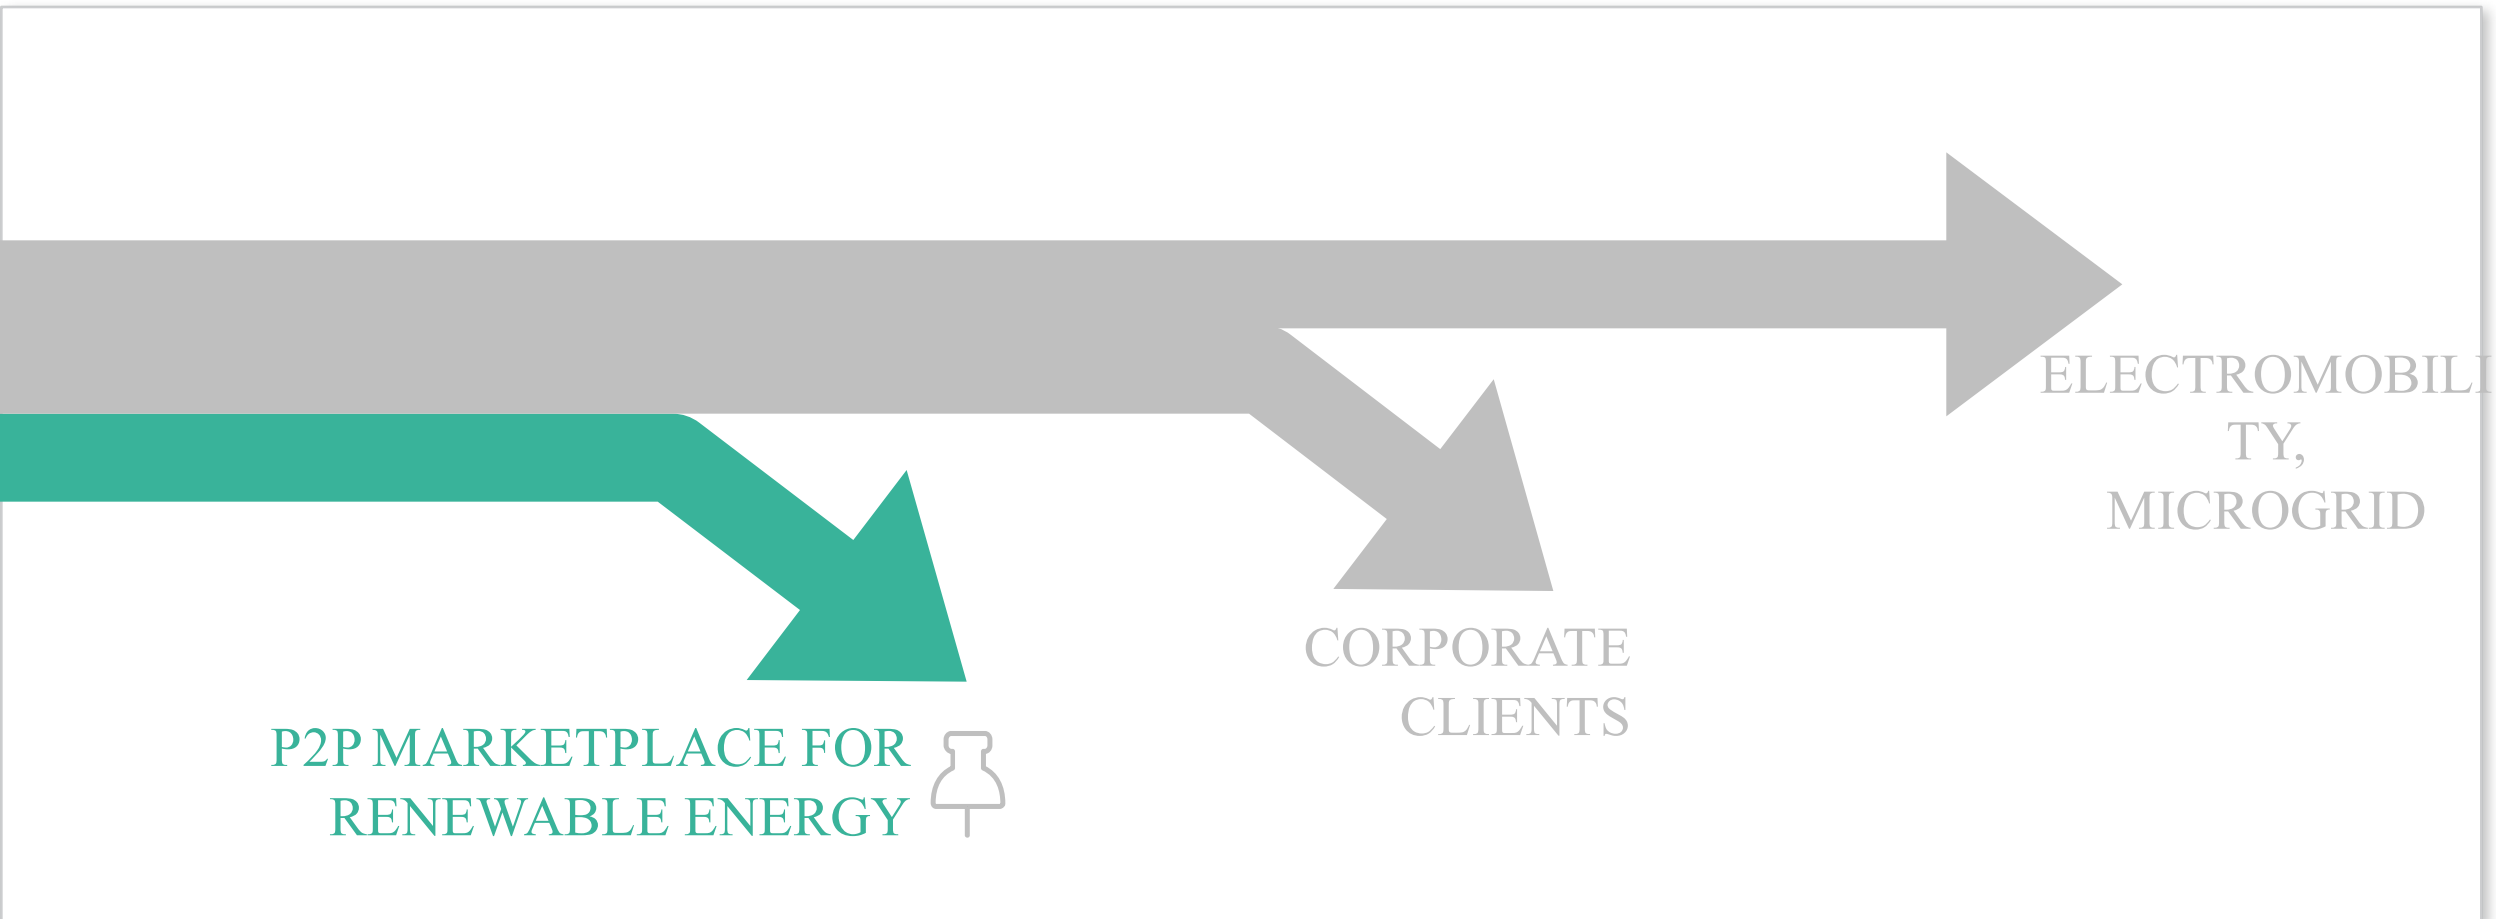

REAL-TIME
SETTLEMENT
ALGORITHM

HIGH-RESOLUTION
DOCUMENTATION OF
THE ORIGIN OF
ELECTRICITY

Elblox: Use Cases

Elblox Platform: The regional P2P Energy Market

- Personalization of electricity
- Peer-2-peer business relationship
- Digitalization of the supply chain
- Low marketing and transaction costs
- Proof of origin based on blockchain technology

REGIONALITY

Regional price signal strengthens investments close to the consumer

SIMULTANEITY

Fluctuating electricity production generates price signal for flexibility in the respective marketplace

NO STATE SUBSIDY

Platform allows renewable plants to earn a premium even after the subsidy schemes have expired

On/off chain architecture of the regional energy market elblox

Regional Energy Market

- Bilateral trade relations
- Real-time load measurement
- Real-time energy settlement

elblox consortium blockchain

- Provenance documented by 15min
- Tamper-proof storage in blockchain
- Certificates directly accessible

Real life pilot in German city (in cooperation with Stadtwerke Wuppertal)

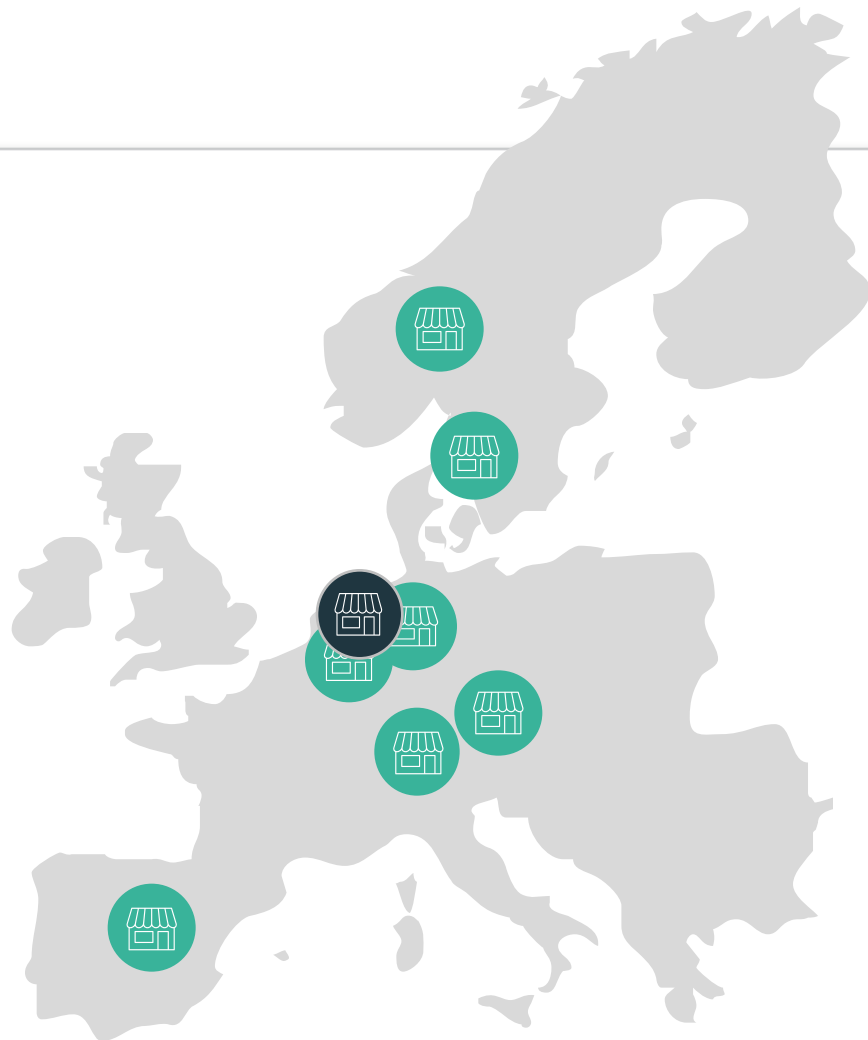

The screenshot shows the 'Mein Strom-Mix' interface on the WSW TalMarkt website. The interface is divided into several sections:

- Map:** A map of the Wuppertal region showing various energy sources and their prices per kWh. The prices are: 7,12 Cent/kWh (Barmen), 7,95 Cent/kWh (Schwelm), 7,95 Cent/kWh (Wuppertal), 6,82 Cent/kWh (Ronsdorf), and 6,82 Cent/kWh (Cronenberg).
- Energy Providers:** A list of energy providers with their rates and details:
 - Biogas BHKW Domagkweg:** 7,12 Cent/kWh. Installed capacity: 140 kW. Annual production: 894 MWh. Serves 298 people.
 - Photovoltaik Jenniges:** 7,95 Cent/kWh. Installed capacity: 480 kWp. Annual production: 400 MWh. Serves 133 people.
 - Photovoltaik Müller & Wiese e. K.:** 7,95 Cent/kWh. Installed capacity: 159 kWp. Annual production: 150 MWh. Serves 50 people.
 - Talsperre Herbringhausen:** 6,82 Cent/kWh. Installed capacity: 203 kW. Annual production: 700 MWh. Serves 233 people.
 - Photovoltaik Müller & Wiese e. K.:** 6,82 Cent/kWh.
 - Biogas BHKW Domagkweg:** 7,12 Cent/kWh.
- Mein Strom-Mix:** A summary of the user's energy mix. The distribution is: 15% WSW KWK Strom, 50% Bürgerwind Cronenberg, 5% Talsperre Herbringhausen, 20% Photovoltaik Jenniges, and 10% Photovoltaik Müller & Wiese e. K. The estimated annual consumption is 3500 kWh. The monthly cost is 2,99 €. A 'Bestellen' button is visible at the bottom.

Wuppertal was only the beginning

:elblox retail clients

- Digital billing and invoicing
- Virtual energy storage
- Interfacing smart home
- E-mobility solution

:elblox corporate clients

- Documentation of energy supply chain
- Transparency through dashboard
- Data exchange through DLT

:elblox e-mobility

Elblox: a Spin-off of Axpo, an energy utility active in 26 European countries

Sales
CHF 5.57 billion

Employees
4,222

Total assets
CHF 19 billion

Renewables
8,942 million
kWh

Spin-off

:elblox

- Early mover in P2P power trading; platform developed since 2015
- Entrepreneurial Spin-off incorporated April 2018

3 Key Innovation Themes in Energy & Blockchain

**P2P trading of
renewable energy**

**Back-end optimisation
wholesale trading**

**Optimising investments
in renewable energy**

POWER  **LEDGER**

theSunExchange

**we
power**

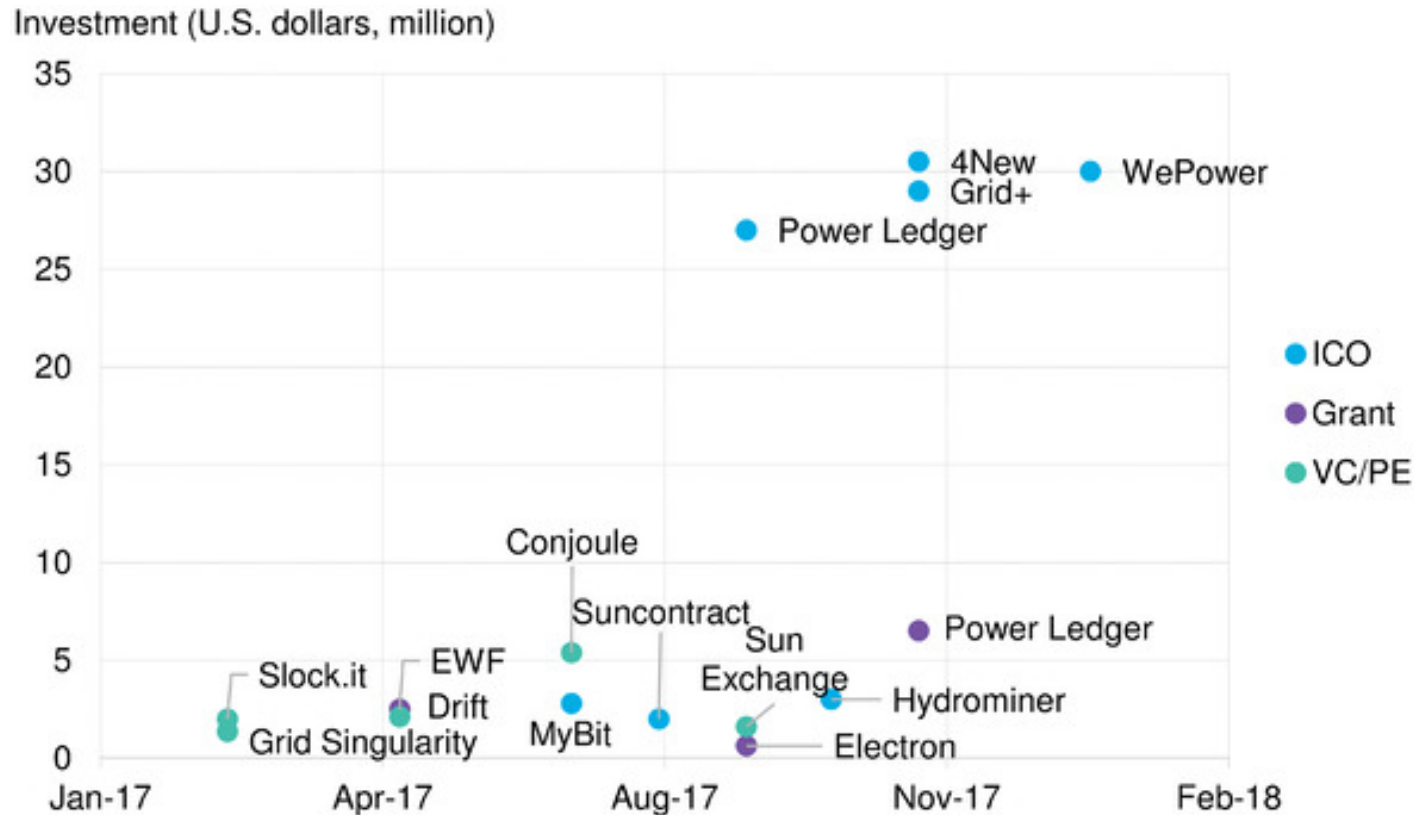

Enerchain: Wholesale Energy Trading on Blockchain

- Decentralised infrastructure for bilateral trading of physical power and gas according to wholesale market rules
- Open API to connect trading screens, algos and third-party services to the distributed order book
- Deal-confirmation and regulatory reporting via blockchain simplify back-office processes
- Easy access and massively reduced transaction costs are attractive for big & small market players

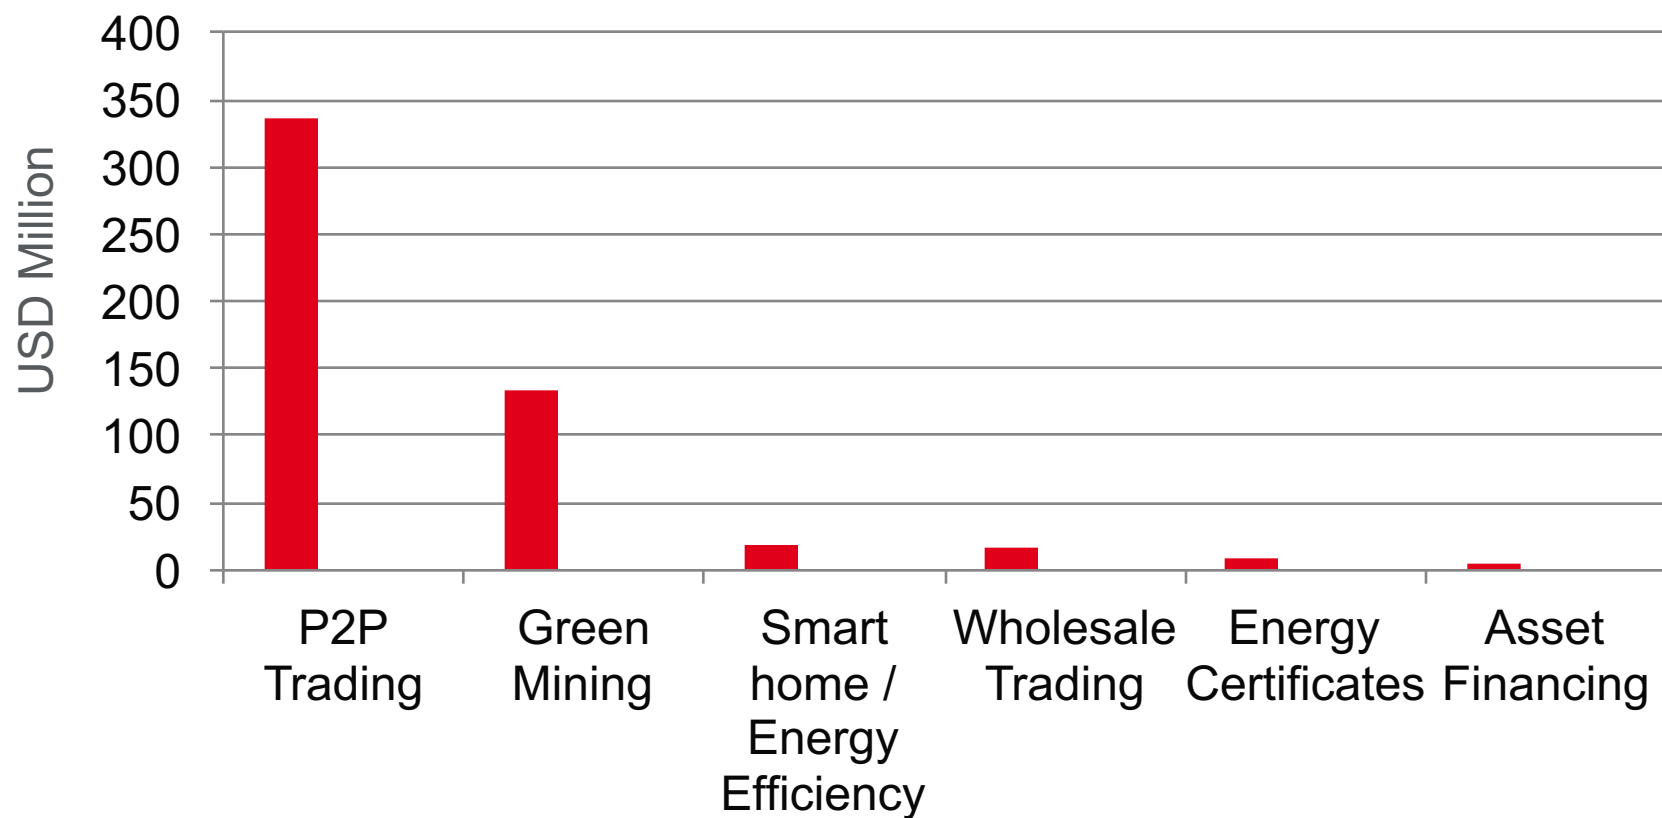

> 100 million USD invested in blockchain start-ups during the last 12 months

Bloomberg New Energy Finance has tracked a total of \$143 million invested in blockchain start-ups active in energy since 2017. Over 85% of funding was raised in mostly double-digit ICOs.

Distribution of 2017 investments in blockchain & energy

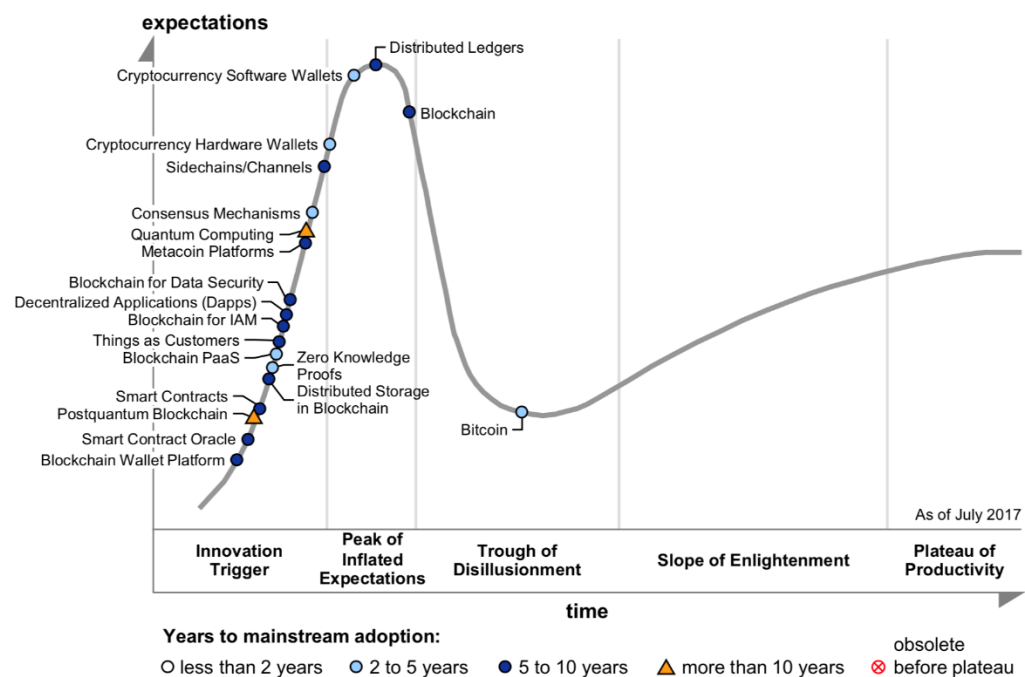

State of the market / trends 2018/19

- **Investments in the space have sky-rocketed from 2016 >> 2017 to hundreds of million USD**
- Still moderate given the total annual investments in energy (> 1.5 trillion USD/a; renewable energy investments > 200 billion USD/a)
- **Big majority of investments through ICOs**
- Shift from investments in US companies to European companies; Europe is now leading (Global reach of ICO makes access to capital easier regardless regional location)
- **Expected trends 2018/19:**
 - **Less «blockchain companies», more companies that use blockchain technologies in the energy sector**
 - **Less financing through ICOs , more financing through traditional means of finance (VC, corporate finance) - in relative terms.**

Conclusions

- The energy sector became very active in the past 18 months exploring the potential of blockchain to innovate/optimize the sector
- 3 key themes can be observed:
 - i. P2P trading of renewable energy
 - ii. Back-end optimisation of wholesale trading
 - iii. Optimising investments in renewable energy
- Main players are currently start-ups but many energy incumbents are becoming active – directly or through subsidiaries/spin-offs
- Axpo started real-life pilots in the fields of i) wholesale trading and ii) P2P trading of renewable energy through its spin-off elblox
